## ABOUT

Obviously I am passionate about technology in all its aspects and in every field of application. I never settle for what I do and monotony is just what I would like to stay away from.

I am a skydiver so I expect a dynamic job, risky but above all not monotonous. I love people, I love working together and creating something out of the business environment.

I am optimistic and I am going to sleep with the thought that sooner or later I will have a revolutionary idea.

I saw a lot of similar cv, and I like problem solving, from mathematical games to the code of a program to create a cv in pdf without using illustrator (like this).
