ABOUT

Obviously I am passionate about technology in all its aspects and in every field of application. I never settle for what I do and monotony is just what I would like to stay away from.

I love people, I love working together and creating something out of the business environment.

I am optimistic and I am going to sleep with the thought that sooner or later I will have a revolutionary idea (BigG stoled one from me 😄).

I saw a lot of similar cv, and since I like problem solving, so I created a cv in pdf without using illustrator/adobe (like this).

I strongly believe in cryptocurrencies. If you disagree, write me.

I do skydive as hobby.

SCHOOL

Certificate in Computer Science at Itis Valturio, Rimini
2009-2013

Degree in computer engineering at Cesena
2013-2016

COOL THINGS I DID

- Built from scratch a complete job section on company site which able HR team to handle/create/edit jobs application with also confirmation emails
- Setup pipelines for each pullrequest in my company projects (easy but with a lot of value)
- Setup a custom and automatic backup flow to sync our CMS (storybook) with specific S3 bucket, avoiding paying much money for the same feature
- Created an SDK for company site and dashboards and maintained as npm package. It use a open api schema for endpoint and provide an easy method to handle authentication and expired tokens
- Setup a lot of e2e tests espacially one for a killer feature mocking HID devices
- Repacked an old exported create-react-app project
- Migrated an obsolete project (js + handlebars + jinja-s) used to build emails into new one with better development experience in mind (react-mail)

EXPERIENCES

Senior Front-End Developer - Conio srl

📅 January 2020 - Present

📍 Milano/Remote, Italia

📄 Responsible for all frontend apps. This includes some internal and external backoffices, company site and custom emails.

📄 - Lead of company site (full NextJS + TS + Storyblock cms, hosted with Vercel).
- Lead of B2B backoffices used by Conio and partner (React + TS + GraphQL + apollo + cypress).
- Creation of tools to increase productivity by automating tasks (Node js).
- Use of HSM keys in the browser running custom firmware to resolve multipart-sign process.
- Maintenance of responsive transactionals emails (custom gulp.js project).
- Drink a good beers with colleagues in the evening, and try to explain to new colleagues that crypto will be the future.

Front-End Developer - Abstract

📅 April 2019 - December 2019

📍 Bologna, Italia

📄 development and release of applications installed in fairs and physical stores on behalf of Luxottica

📄 - I deal mainly with the maintenance of projects developed with React. The sites are formed by an ui project and an api project. The first one is developed in react and grapql and the second one is developed in express + typescript + redis. The sites are developed for the totem used in a Luxottica brands stores

Front-End Developer - Yoox-Net-A-Porter

📅 November 2016 - April 2019

📍 Zola Predosa, Bologna, Italia

📄 Maintenance of 4 important e-commerce sites

📄 I deal mainly with the maintenance of projects developed with .NET stack with js and css front-end side. The difficulty lies in the dependencies of other teams and therefore the coordination with them. I often develop in TDD and try to create internal tools if necessary
